

# 389/P > The new reference

For plastic pipes made of PE, U-PVC and MO-PVC.

Two M16 fasteners only facilitate and cut installation time and provide optimised corrosion resistance

> Female threaded strap avoids any galling risk and allows for one-hand tightening  
> Long bolts make installation easier even on ovalised pipes

Profiled and centred gasket ensuring perfect water tightness with the pipe

Safety stops prevent pipe creeping due to excessive tightening

Ductile cast iron with 120 or 250 µm thick epoxy coating, including in the threads

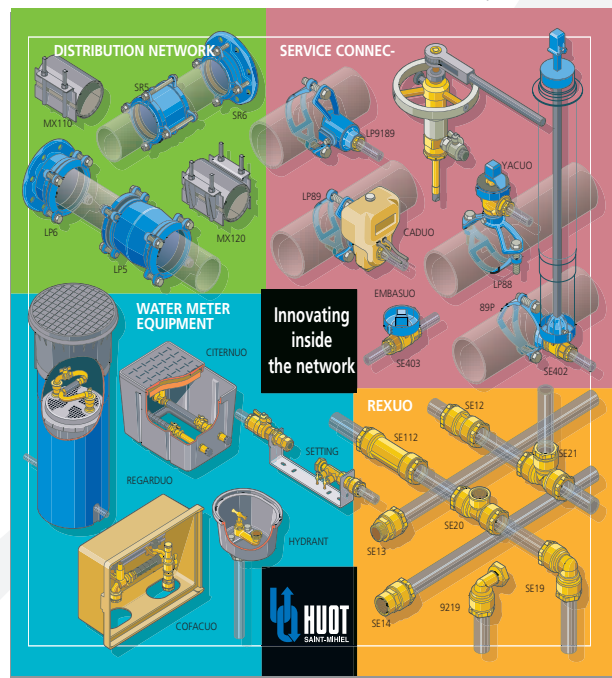

## Service connections

# Technical innovation for the water industry

Drinking water distribution systems are part of our common heritage. Their pipe coupling and service connection components should have the same performances and life as the piping on which they are fitted.

Designed and manufactured in France
