3089 > high performance tapping machine

PERFORUO tapping machine

Designed for the execution of under pressure tapping on all types of drinking water networks, this tapping machine is an efficient tool for its drilling quality and simplification of the interventions

Optimized drilling tools

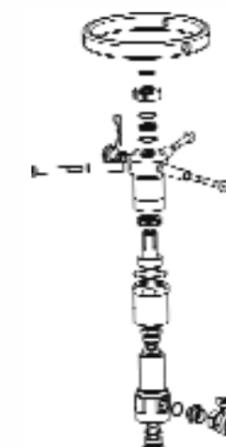

- > Improved drilling and evacuation processes
- For plastic pipes :
 - > recovering of the plastic chip.
- For metal pipes :
 - > two different steps for a pilot hole and ND boring

Self drilling system

- > On plastic pipes, with engaged self-drilling system (pin engaged), in automatic mode

with bell-shaped drill bit, - Ø 20, 25 & 32 mm only

Easier maintenance

- > The machine can be completely taken down for cleansing and lubrication

Bore chip evacuation

- > Permanent flushing of the bore chips thanks to drilling directed outwards the pipes

Compactness

- > Easier handling on congested networks or in narrow trenches

PERFORUO 3089 CC

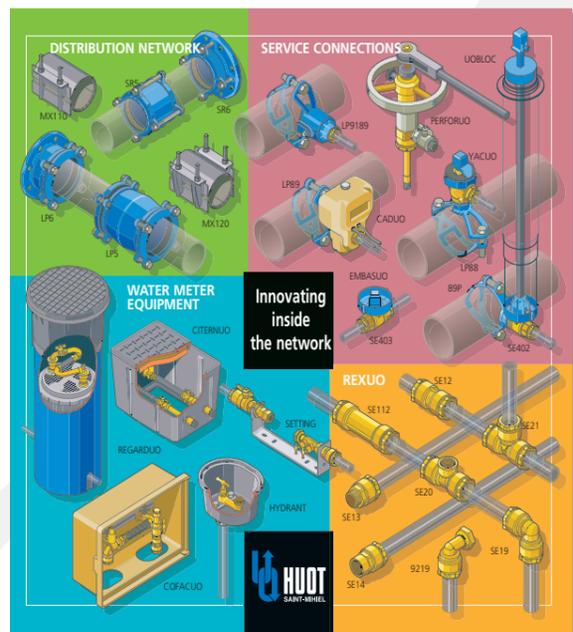

Heavy-duty and very easy to use

- > The carrying case of the PERFORUO 3089 contains all accessories for its use

Technological innovation in the service of water control.

+ The drinking water distribution networks are part of the community assets. The performances and life span of its connections and equipments must meet those of the pipes they are fitted on. For this reason , products chosen with care and installed rigorously will ensure the good working order and the lasting quality of those assets. +
